

THE PEOPLE AROUND ONE SIGNAL

Who sees it, who investigates it, who decides, who audits.

Dr. Harleen Kaur
Pharmacovigilance Physician
Teaching hospital · Patiala, Punjab

Where evidence begins

Spots a possible reaction to a new cancer medicine and reports it through the existing pharmacovigilance route.

Gurpreet Singh
Pharmacovigilance Safety Analyst
Company A · India PV team · Mohali, Punjab

Daily Hygelis user

Asks Hygelis to investigate the potential Narevia hepatic signal and reviews the evidence package it builds.

Dr. Manpreet Singh
Head of Pharmacovigilance, India
Company A · Gurgaon / Delhi NCR

Economic buyer · decides

Reviews the investigation package and makes the decision, within Company A's existing processes.

Simranjit Kaur
PV Quality & Compliance Lead
Company A · Chandigarh, Punjab

Governance · can veto

Checks that every step, source and human decision behind the signal is traceable and preserved.

SYSTEM BOUNDARY

Dr. Harleen Kaur

38 · Pharmacovigilance Physician

Tertiary-care teaching hospital · Patiala, Punjab

Patiala · clinical observation

Sees suspected adverse drug reactions in routine clinical care
Documents them and reports through the hospital's established
ADR reporting route · not a Hygelis user or buyer

"I can investigate the case in front of me.
I can't manually search every other case
that might be connected to it."

Buying power 

Hands-on Hygelis use none: not a Hygelis user

Need for traceability 

WHAT SUCCESS LOOKS LIKE

**A complete, timely report that gets
looked at alongside related cases**

PAINS

- She sees one patient's reaction, never the wider pattern
- Reporting competes with a full clinical workload
- She rarely learns what happens after a report is sent
- Newer medicines have little real-world safety history yet

GOALS

- Report suspected reactions accurately and on time
- Know that serious observations are assessed in context
- Keep patients on new medicines safe

WHAT SHE NEEDS FROM THE SYSTEM

- One established way to report, not another portal
- Patient privacy respected at every step
- Her observation treated as evidence, not noise

WHAT HYGELIS CHANGES (AND DOESN'T)

Nothing in her workflow: Hygelis never sees her hospital's records. If her report reaches Company A through the existing route, Hygelis can link it with similar cases and literature, so one observation can become part of a properly investigated signal.

Gurpreet Singh

31 · Pharmacovigilance Safety Analyst

Company A · India PV team · Mohali, Punjab

Mohali · signal investigation

Reviews safety cases for completeness and follow-up needs

Screens literature and checks for duplicate or similar cases

Prepares the evidence senior reviewers decide on

**"The hard part isn't finding one case.
It's figuring out whether ten different
pieces of evidence are telling us the same story."**

Buying power

Hands-on Hygelis use

Need for traceability

WHAT SUCCESS LOOKS LIKE

**A review-ready evidence package,
built without days of manual searching**

PAINS

- Evidence is scattered across cases, literature and past reviews
- Manual searches and duplicate checks eat most of the week
- Hard to show reviewers why a pattern matters
- Worry that a real signal sits in cases he hasn't reached yet

GOALS

- Spend his time on judgment, not searching
- Hand over complete, consistent evidence packages
- Catch real signals earlier, with fewer false alarms

WHAT HE NEEDS FROM HYGELIS

- Every finding traced back to its source
- Conflicts and uncertainty shown, not smoothed over
- Fits the existing safety database and review process
- He decides what goes forward; nothing is sent automatically

WHAT HYGELIS CHANGES FOR THEM

From searching for signals to investigating them. Hygelis runs the multi-step investigation (related cases, literature, history, alternative explanations, conflicts) and Gurpreet reviews a structured package instead of assembling one by hand.

Dr. Manpreet Singh

47 · Head of Pharmacovigilance, India
Company A · Gurgaon / Delhi NCR

Gurgaon · enterprise PV oversight

Accountable for India PV quality, consistency and timelines
Oversees review of emerging safety issues
Owns the budget and vendor decision for PV tooling

“Can your system show me exactly
why this became a signal?”

WHAT SUCCESS LOOKS LIKE

Every signal reviewed on time, with
a rationale he can defend

PAINS

- Case and literature volumes rise faster than the team
- Signal reviews vary with who prepared them
- Black-box AI tools that can’t explain themselves
- A missed or late signal is ultimately his accountability

GOALS

- Find and assess emerging safety issues earlier
- Consistent, defensible signal decisions
- More team capacity without lowering quality

DECIDES ON

- Explainability: sources and reasoning behind every signal
- Human review built in; no autonomous regulatory action
- Validation evidence, audit readiness and data protection
- Fit with existing safety systems, SOPs and vendors

WHAT HYGELIS CHANGES FOR THEM

A consistent investigation package for every potential signal (evidence, reasoning, uncertainty and conflicts laid out), so his team’s decisions are faster to reach and easier to defend. Hygelis prepares; he and his qualified reviewers decide.

Simranjit Kaur

35 · PV Quality & Compliance Lead

Company A · Chandigarh, Punjab

Chandigarh · governance

Owens PV quality systems, SOPs and audit readiness
Prepares the team for inspections and internal audits
Must sign off before any new system goes live

“Show me everything Hygelis used
to reach this conclusion.”

Buying power

Hands-on Hygelis use

Need for traceability

WHAT SUCCESS LOOKS LIKE

Every signal decision fully traceable
at audit, with nothing reconstructed

PAINS

- Decisions documented differently by each reviewer
- Rebuilding the history of an old signal decision is slow
- AI outputs that can't be traced or reproduced
- Unclear who approved what, and when

GOALS

- Inspection-ready traceability for every signal
- Clear accountability for each human decision
- The same controls across products and teams

WHAT SHE NEEDS FROM HYGELIS

- Source provenance and a full investigation log
- Model and version history for every output
- Human approval records with reviewer identity
- Role-based access, access logs and retention controls

WHAT HYGELIS CHANGES FOR THEM

Every signal carries its own audit trail: sources, reasoning, confidence, conflicting evidence, model version and the human decision, linked and preserved. Personal data is minimised, access-controlled and logged, in line with India's DPDP Act.
